Safety and precision

The signature of quality!
In 1949 Mr Fritz Brumme, an engineer at Opel, founded the EFFBE Company in Frankfurt in Germany. A year later he designed, developed and manufactured the first diaphragm in synthetic rubber which enabled quintupling of the lifetime of fuel pumps.

Thanks to the development and adjustment of new materials, Effbe has extended since then its expertise in activity fields such demanding as automotive, gas, water industry, pneumatic systems, aeronautic...

Impeccable quality, unequalled products lifetime, advanced Research & Development department and presence in more than 40 countries: for high performance diaphragms, Effbe is the partner par excellence.
Reciflex® solutions

Manufactured of coated fabric, the RECIFLEX® solutions have proven their reliability and their precision on millions of vehicles and in many industrial applications.

The main assets of the RECIFLEX® diaphragms are:
- a sensitive operating due to lack of friction even in difficult conditions.
- a great reliability thanks to the use of coated fabric especially conceived.
- an economical conception for an operating without any maintenance.
- an optimal lifetime.

• Construction

The RECIFLEX® diaphragms are made of a fabric coated on both sides with elastomer. These shaped diaphragms are formed under pressure and temperature. The form of the RECIFLEX® diaphragms allows a better stroke in comparison with flat diaphragms.

• Material

Due to the different application conditions and to the static, dynamic, chemical and thermal influences, EFFBE proposes a large range of materials and material combination.

Application fields

- Automotive industry
- Transports
- Gas industry
- Hydraulic and pneumatic systems
- Medical technologies
- Electronic
- Electricity
- Water industry...
Flat diaphragms

- **Characteristics:**
  - pressure loadable on both sides
  - same effective area on both sides
  - limited stroke as defined hereunder:
    - \( H_{\text{max}} \leq 0.06 \times DG \) (regulatory function)
    - \( H_{\text{max}} \leq 0.1 \times DG \) (pump function)
  - low hysteresis
  - no stick-slip effect
  - \( DLM = DLG + 0.02 \times DG \)

- **Design:**
  - of coated fabric
  - fabric reinforced
  - rubber sole

- **Functions:**
  - pump
  - regulation
  - control and measurement

- **Construction and dimensions:**

EFFBE, your development partner for high performance diaphragms, stays at your side all project long, from the start until serial achievement.
Convoluted diaphragms

- **Characteristics:**
  - pressure loadable in loop direction
  - small effective surface change
  - average stroke
  - \( H_{\text{max}} \leq 0.19 \times DW \)
  - low hysteresis
  - no stick-slip effect
  - design part for sealing function
  - very long working lifetime

- **Design:**
  - of coated fabric RECIFLEX®
  - fabric reinforced
  - rubber sole

- **Functions:**
  - regulation
  - dosing
  - control and measurement
  - valve

- **Construction and dimensions:**

\[
\begin{align*}
h & = \text{diaphragm depth} \\
D_A & = \text{outer diameter of the diaphragm} \\
D_G & = \text{housing inside diameter} \\
D_W & = \text{effective diameter} \\
D_T & = \text{supporting plate diameter} \\
H_{\text{max}} & = \text{admissible total working stroke, corresponds to } h \times 2 \text{ max} \\
P_1 / P_2 & = \text{pressure impact } P_1 \leq P_2 \\
R & = \text{transitional radii}
\end{align*}
\]
Dish shaped diaphragms

• Characteristics:
  - pressure loadable on both sides
  - same effective area on both sides
  - average stroke
  - H max ≤ 0.24x DW
  - low hysteresis
  - no stick-slip effect
  - design part for sealing function
  - long working lifetime

• Design:
  - of coated fabric RECIFLEX®
  - fabric reinforced
  - rubber sole
  - with barrier foil (PTFE, PI)

• Functions:
  - regulation
  - actuator
  - dosing
  - control and measurement
  - valve

• Construction and dimensions:

h = diaphragm depth
D_A = outer diameter of the diaphragm
D_G = housing inside diameter
D_W = effective diameter
D_T = supporting dish according to the shape
H_max = admissible total working stroke, corresponds to h x 1.7 max
P_1 / P_2 = pressure impact
R = transitional radii

EFFBE, your development partner for high performance diaphragms, stays at your side all project long, from the start until serial achievement.
Rolling diaphragms

• Characteristics:
- pressure loadable only on molding
- few changes in effective area
- \( H_{\text{max}} \leq 0.67 \times \text{DW} \) (RECIFLEX®)
- \( H_{\text{max}} \leq 1.14 \times \text{DW} \) (with fabric reinforcement)
- \( H_{\text{max}} \leq 1.14 \times \text{DW} \) (without fabric reinforcement)
- very large stroke
- possible low hysteresis
- for devices of reduced size
- no stick-slip effect
- design part for sealing function
- long working lifetime

• Design:
- of coated fabric RECIFLEX®
- fabric reinforced
- rubber sole

• Functions:
- regulation
- actuator
- control and measurement

• Construction and dimensions:

\[
\begin{align*}
\text{h} & = \text{diaphragm depth} \\
D_1 & = \text{outer diameter of the diaphragm} \\
D_2 & = \text{housing inside diameter} \\
D_3 & = \text{diameter of the piston supporting diaphragm} \\
D_4 & = \text{diameter of the supporting piston with inclination in compliance with diaphragm shape} \\
D_{\text{eff}} & = \text{effective diameter} \\
H_{\text{max}} & = \text{admissible total working stroke, corresponds to h x 1.7 max} \\
P_1 & = \text{pressure impact} \\
R & = \text{transitional radii}
\end{align*}
\]

EFFBE, your development partner for high performance diaphragms, stays at your side all project long, from the start until serial achievement.
Diaphragms with insert

Effbe, specialist of the design and manufacturing of elastomeric parts with insert

The carrying out of elastomeric parts with insert must be of high precision, that is why Effbe uses and develops the most suitable materials in order to get a perfect contact between the elastomer and the insert.

Our diaphragms with insert are mainly designed for fluid control applications.

- **Design:**
  - of coated fabric
  - fabric reinforced
  - rubber sole

- **Insert types:**
  - paper gasket
  - metallic
  - plastic
  - PTFE...

- **Functions:**
  - pump
  - valve

Technical parts in elastomer

Thanks to the know-how, to an advanced knowledge of the materials and to the experience in the design of technical parts, Effbe proposes you a custom-made solution.

EFFBE, your development partner for high performance diaphragms, stays at your side all project long, from the start until serial achievement.
All synthetic rubbers are used • own recipe development and mixture manufacture • for use in temperatures ranging from -60°C to + 280°C • resistant to nearly all liquids and gases in use • in accordance with DVGW, KTW/WRC, BGA/FDA requirements.

</table>
For application where the diaphragm has a fluidway function, EFFBE proposes a range of "antiweaking" coated fabrics.

Denomination of the Effbe coated fabrics

They indicate the basic data and the combination of respective materials. The following diagram represents the example of a coated fabric.

**Fabric Base Materials**
- Ag = Polyamide
- AgN = Polyarylamide
- Cg = Carbon
- Gg = Glass
- Tg = Polyester
- Yg = Cellulose

**Base elastomers**
- B = Butyle
- C = Chloroprene
- D = Isoprene
- E = Ethylene-Propylene-Terpolymer
- F = Fluoro
- N = Nitrile
- P = Epichlorhydrine
- S = Fluosilicone
- S = Silicone

The opposite table allows the selection of suitable EFFBE coated fabric in accordance with given application criteria.

“Antiweaking” coated fabrics

For application where the diaphragm has a fluidway function, EFFBE proposes a range of “antiweaking” coated fabrics.
