

Diaphragms with insert

Effbe, specialist of the design and manufacturing of elastomeric parts with insert

The carrying out of elastomeric parts with insert must be of high precision, that is why Effbe uses and develops the most suitable materials in order to get a perfect contact between the elastomer and the insert.

Our diaphragms with insert are mainly designed for fluid control applications.

• Design:

- of coated fabric
- fabric reinforced
- rubber sole

• Functions:

- pump
- valve

• Insert types:

- paper gasket
- metallic
- plastic
- PTFE...

Technical parts in elastomer

Thanks to the know-how, to an advanced knowledge of the materials and to the experience in the design of technical parts, Effbe proposes you a custom-made solution.
